Spectacular Science Show Assemblies

Interactive 45 minute in-school field trip assembly show

Designed for one grade at a time

Discounted if multiple grades schedule on the same day

Most shows perfect for up to 125 kids per show, all ages, unless otherwise noted

\$225 for one grade or 125 participants

2 grades \$175 each, 3 or more \$150 each

For 50+ Pre-K students we split into two - 30 minute groups (\$225)

Add DIY Slime, Silly Putty, Bouncy Balls/Planets, Cotton Candy, or Straw Rockets for an additional fee

Travel fees may apply more than one hour from Nashville

How to Schedule a Show

Pick a date.

Choose **one** Assembly Show Theme **per visit**.

Contact us with theme, date(s), approximate number of participants, grade level(s), and start time/schedule.

► We Make Science Fun!

Dry Ice or Spectacular Science Show

An interactive show with a dozen experiments, explosions, bubbling potions, and chemical reactions. Children learn valuable science fundamentals while having fun!

Energy Show

We use electricity to produce magnetic fields; use magnets to produce electricity; and see how these two forces are facets of the larger force, electromagnetic radiation. Recommended for 1st grade and up.

Engineering Show

This show is full of engineering feats, with our Ping-Pong Pulverizer and various simple machines! We have a large catapult that we use to understand propulsion and basic engineering methods! Recommended for 1st grade and up.

Fizz, Pop, Boom

A broad range of scientific topics with tornado simulations, sound FX, optical illusions, and, of course, explosions! Perfect for all ages.

Forces and Motion Show

The Laws of Motion workshop explores magnetism, gravity, inertia, forces of nature, electricity and centrifugal force. We explore Isaac Newton's Second Law of Motion - $Force = Mass * Acceleration$. Perfect for all ages

Glow In The Dark

Lasers, Rainbow Glasses, Glow Stick Science (Chemiluminescence), and 'Capture a Shadow' brings us a fun, educational, and ghostly time. A great show for Halloween or any time of year. Recommended for 1st grade and up. **Must be able to darken the room.*

Hair Raising Excitement

This interactive program is all about electricity. Kids of all ages will light up light bulbs, shock each other, make their hair stand on end and of course, create explosions! This electric show is all hands-on, super exciting and fun! Indoor only and best in low humidity. Recommended for 1st grade and up.

► We Make Science Fun!

Journey to the Center of the Earth

While learning about the Earth as a magnet, kids will make a volcano erupt, crush rock, and journey to the Earth's core. Recommended for 2nd grade and up.

Lasers and Electricity

Learn about light waves and lasers and explore the light of electricity. Recommended for 1st grade and up. **Indoors only. Must be able to darken the room.*

Lasers, Lasers, Lasers

Our laser program features a look at light as color and energy! First, we split light into its visible wavelengths to reveal its true spectral patterns, then we amplify light with surprising results. All ages! **Indoor show only. Must be able to darken the room.*

L'il Scientists

The ping pong pulverizer, the potato gun, and explosions will have your preschoolers mesmerized and laughing with delight, all while learning science! Great for Pre-K or all ages.

Liquid Nitrogen Explosions**

What happens when you superheat freezing cold -320°F (-196°C) liquid nitrogen? Let's learn some science as we make a plume of vapor 30 feet in the air! It's explosive!

***Additional fees apply.*

Making Waves! The Physics of Light & Sound

Get your students excited about science with this Light and Sound Show. First, our laser program looks at light as color and energy. We split light into its visible wavelengths to reveal its true spectral patterns then amplify light with surprising results. Next, we wow participants with our sound machine experiments, explaining why volunteers sound like chipmunks, Darth Vader, or robots. We also include hands-on experiments that teach about vibration, pitch, and sound waves. A giant slinky is involved. All ages! **Indoors only.*

Preschool Silly Science

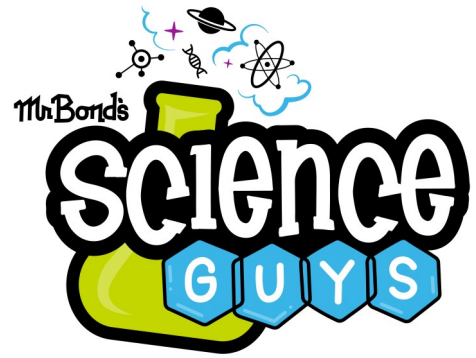

For the very youngest future scientists! 3-7-year-olds will love this fun and exciting program with bubbling potions, Mega Hoberman Sphere, exciting chemical reactions, and, of course, explosions!

► We Make Science Fun!

Science of Magic

See The Science Guy make water disappear, create optical illusions, and teach how magnetism is used in magic. We discover that magic is just science without an explanation! Recommended for 1st grade and up. **50 kids or less*

Science of Sport

Experiments about hand-eye coordination, lung capacity, Bernoulli's principle, aerodynamics, balancing miracles, the sweet spot on rackets, and much more! Recommended for Kindergarten and up!

Science of Superheroes

Spectacular experiments inspired by everyone's favorite comic superheroes. Weave the web of Spiderman, control the electric power of Ironman, sample the marvelous toys of Thor, and much more! Recommended for Kindergarten and up!

Scientists from Around the World

An exciting show that is full of experiments to entertain and educate everyone. The Science Guy will discuss how fireworks were introduced by the Chinese and the Periodic Table by Russia. There are experiments involving electricity (England), explosions (France) and an explosive experiment using liquid nitrogen from Scotland. Best for 4th grade and up.

Solar Eclipse Show

Dozens of fun and interactive experiments. This show includes an exciting interactive demonstration of how and why a solar eclipse happens. Kids learn about the moon's orbit, its' phases, and the path across the U.S that we saw during the eclipse of August 21st, 2017. All ages.

Space Show

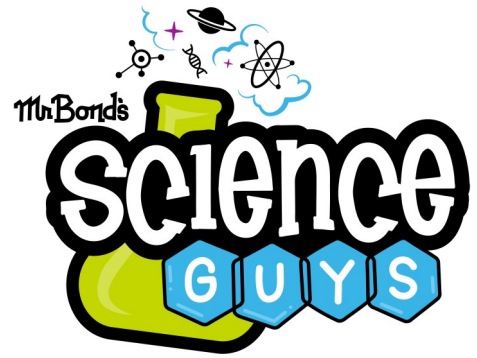

A show about the Universe and how we explore it! Dozens of interactive experiments about life in a spacesuit, spacewalks, electromagnetic rocket propulsion, and centrifugal force. Learn about the Solar System with everyone's favorite, the Hoberman Sphere! All ages.

► We Make Science Fun!

Spooky Science

This show reveals the science behind dense, thick, and eerie fog! We learn to make the spooky call of a screeching owl, we create bubbling potions and make kids glow in the dark, as well as performing amazing optical illusions! All ages.

Tomorrow's World / Building a Better World

Inspired by Mr. Bond's favorite childhood program, Tomorrow's World! The Science Guys demonstrate to our audiences how science is building a better world! New technologies, new forms of energy, and a look at science for Tomorrow's World! Kids have a tug-o-war, launch objects, and light up the room. All ages.

Valentine's Day Theme

The Science Guys explore the science of love with bubbling love detectors, magic color-changing hearts, arrows launched from Cupid's Bow, and more! All ages.

Walloping Weather

Learn about rainbows, blow out tornadoes with a vortex generator, and explore lightning through experiments with electricity! All ages. **Indoors only.*

Winter Wonderland Show**

Lasers, Lights, and Snow! The Science Guys celebrate all the fun of winter! Chilling experiments and hands-on excitement for kids of all ages! Includes "make your own snow" for up to 50 kids. Add on Holiday Slime or more participants for an additional fee. ***Additional fees apply.*
